agiosatbroadcast™

The Ultimate Global Media Service
network available 24x7x365.

Agiosat hubs offer domestic and international, full service video transmission solutions for news, sports, special events and program distribution via satellite.

Because the need to connect can happen anytime, anywhere.

Agiosat hubs include a broad range of C-Band and KU-Band satellite antennae, encoding and encryption equipment as well as program origination facilities. Our teleports are owned and/or operated by Agiosat with direct connectivity to the fiber-optic backbone. All Agiosat Teleport services are backed by a 100% availability guarantee.

Agiosat Broadcast provides:

Broadcast Video Services

- Full-time domestic and international transmission of cable and direct-to-home programming via analog or digital technology (Videocypher II and Digicypher II)
- Occasional transmission of news, sporting events, syndication, and other ad hoc content in analog, digital, or HD formats.
- Connectivity to production houses with full production capabilities available upon request
- DVB compliant digital compression services
- Teleport services include a 100% availability guarantee
- Monitored 24x7x365 by our technical operation centers

Agiosat dedicated fiber backbone ensures global IP connectivity.

- Americas
- Europe, Africa Middle East
- Asia Pacific
- Voice over IP (VoIP) Services
- Global WAN and VPN Services

About Agiosat.

Agiosat hubs create a global network which is then customized to customer specific requirements for full-time or occasional media as well as data transmission needs. Our hubs can utilize Agiosat space segment inventory or reach virtually any major carrier and/or customer provided transponders. Agiosat global network, transmission services and fiber backbone are bundled to provide solutions customized for the customer and/or the specific event.
