

# MOBILITY & CONNECTIVITY

## Agiosat Enhanced Satellite Service

There's a Big Difference among BGAN Service Providers. Agiosat's Enhanced Satellite Service is the Better BGAN Solution.

On the surface, it may appear that all BGAN services operate in the same manner with the same results regardless of the service provider. In reality, there are very significant differences based upon the service provider you choose. Agiosat Global Communications, utilizing its "Enhanced Service" capabilities, provides BGAN service that is faster, more reliable and offers more delivery options than any other BGAN service provider.

BGAN is essentially the same service for the connection from the originating location to the Inmarsat hub. The BGAN terminal at the origination location connects to one of the Inmarsat satellites and is then received at an Inmarsat teleport typically located in Amsterdam. The next part of the connection, from the Inmarsat teleport to the final destination, is where there are wide variances among the service providers. It's at this point that Agiosat enhances and improves the BGAN signal to increase its throughput, reliability, and delivery options.

# Enhanced BGAN Service from Agiosat Global Communications

Speed, Reliability, Flexibility and a Full Suite of Connectivity Services No One Else Can Offer.

The Difference is Agiosat.

With Agiosat, you get unparalleled speed and throughput. It also permits access to some exceptional additional services no one else provides. For example, Agiosat's unique speed enhancement capability is a special protocol enhancement that increases the effective data rate providing greater speed and capabilities for BGAN.

With Agiosat's Enhanced Service, you have a choice for delivery to the final destination(s). Since Agiosat is a full-service teleport, you can choose between VSAT, common carrier, PSTN or U.S. based Internet. Agiosat's network also supports full VPN and private secure networking capability as well as BGAN to BGAN connectivity and Iridium. There's even full video processing, enhancement and transport facilities. Plus Agiosat's 24/7 LIVE customer support with an engineer on duty for fast problem resolution.

There is a difference between BGAN Service Providers, and a reason why Agiosat continues to be the leader in satellite-based connectivity. Only Agiosat offers such a wide array of

services designed to provide complete end-to-end connectivity solutions. Agiosat's enhancements ensure fast, reliable and functional service. Our teleports provide a number of choices for high speed, high bandwidth connectivity via satellite, fiber or the PSTN. Best of all, Agiosat offers this superior level of service at a price that is extremely competitive with the pricing of other service providers. There is a better solution: Agiosat Global Communications.

Agiosat Enhanced BGAN Service:

- Maintains an integrated network from Inmarsat's European teleport to the Agiosat U.S. hub
- Has dedicated APN for military and other customer traffic
- Has full direct interconnectivity and interoperability with Agiosat Ku and C-band VSAT networks
