

North American Public Safety Network

True Interoperability - Everywhere!

Agiosat's North American Public Safety Network (NAPSN) is the **only** satellite-based, purpose-built network for the Public Safety and First Responder communities. It ties disparate standard and geographically diverse terrestrial-based networks together seamlessly across the United States and Canada. Collaborative networks are now achievable in both daily and emergency operations. The NAPSN provides system and standards agnostic interoperable portals at the transport level, eliminating the requirement for special conversion equipment between networks.

The NAPSN is the ultimate interoperability portal.

- **Systems and Standards Agnostic**
- **Utilizes modern, IP-centric satellite systems that are inexpensive to acquire and operate over a 20 plus year system service life**
- **Provides resilient wide-area backhaul connections for voice and data traffic to central dispatch locations, statewide or nationally**
- **Provides secure transfer of CJIS/LETS data to any remote location**
- **Create inexpensive network infrastructure for emerging standards (700Mhz) and broadband applications**
