PRESS RELEASE

AGIOSAT GLOBAL COMMUNICATIONS LAUNCHES TWO-WAY RADIO OVER SATELLITE

April 11, 2006 (Burbank, CA) Agiosat Global Communications announces the launch of its Agiosat LMR solution. Using two-way radio dispatch system and radio handsets meeting the P125 standard, users can communicate via two-way radio anywhere within the Agiosat Global Network.

This is revolutionary in that users can communicate across vast distances that up to now were impossible to achieve without spending exceptionally large amounts of capital. Agiosat uses commercially available off-the-shelf equipment and integrates that equipment into the Agiosat Global Network without additional cost interfaces or software. For example, Agiosat has demonstrated the system with two-way radio communication occurring between Atlanta, GA and Burbank, CA.

“Agiosat 2-Way lets 2 way radio users communicate almost anywhere in the world using the P125 standard without having to procure any specialized 2-Way equipment, said Rick Swiers, Agiosat’s Vice President of Marketing. “This has powerful implications in terms of creating a national and/or international capability for geographically diverse agencies to communicate with great immediacy during disaster and emergency situations. It also is an excellent LMR backhaul system freeing frequencies for field use and eliminate expense microwave infrastructure.”

Agiosat Global Communications is a privately held corporation with corporate headquarters in Burbank, CA. It owns or manages technical facilities in Atlanta, GA, Burbank, CA and Sylmar, CA as well as maintaining offices in other locations including Washington, DC. Agiosat maintains a number of satellite-based networks with a global reach. In addition, Agiosat also provides a variety of customizable satellite-based solutions for first responders, government, maritime, exploration, enterprise and many other market segments.
